EDUCATION

Carleton University, Ottawa ON — Bachelor of Computer Science | May 2026
Relevant Courses: Database Management Systems, Statistics, Web Development, Object Oriented Programming

TECHNICAL SKILLS

Languages: Python, SQL
Data & Analytics: Pandas, NumPy, EDA, Data Cleaning, Pipeline Design, Trend Analysis
Database: SQL Query Development, PostgreSQL,
Tools: Git, GitHub, Postgresql, Sqlite, Jupyter Notebooks, Excel, VS Code

PROJECTS

Hacker News Post Analysis
Python | Oct 2026

- Analyzed Hacker News post dataset of 20,000 rows with Python's built in csv and datetime modules
- Compared comment engagement among "Ask_HN", and "Show_HN" posts, and determined "Ask_HN" posts have 14 comments on average while "Show_HN" posts have 13 comments on average
- Grouped Ask_HN posts by hour to determine number of comments per hour
- Found that 3:00PM EST to 4:00PM EST was the time with the most engagement, averaging at 38.6 comments per post

Job Market Job Analysis
SQL, PostgreSQL, Git, Github | June 2026

- Conducted analysis of top skills required for data engineering jobs
- Used PostgreSQL as database management system
- Executed complex SQL queries to gain valuable and actionable insights on which skills were optimal for the data engineering job market
- Conducted analysis for remote jobs and jobs located in Toronto, ON, Canada
- Determined that SQL and Python were the most in-demand skills for the job market

Social Media Mental Health Analysis
Python, Pandas, NumPy, Matplotlib | May 2026

- Conducted end-to-end statistical analysis on 1M+ records, identifying correlations between social media usage and mental health scores.
- Cleaned, standardized, and validated raw data using Pandas and NumPy, resolving inconsistencies across the full dataset.
- Grouped comparisons by category and quantified scores with t-tests to determine that mental health score dropped from 8.02 to 4.12 with increased usage
- Built a reproducible pipeline (EDA → Statistical Analysis → Trend Visualization) with clear documentation for stakeholder handoff.

CERTIFICATES

LinkedIn Learning - Machine Learning With Python

May 2026

- Completed a course on how to train machine learning models in Python
- Learned how to split a dataset into training and testing data for a machine learning model
- Learned about different machine learning patterns and methods such as supervised learning, and unsupervised learning
- Studied different classification algorithms such as KNN, as well as various metrics of classification such as Jaccard Index, F1 score, and Log Loss

LinkedIn Learning - Automation with Python

Aug 2026

- Completed a course on how to automate various tasks with Python
- Learned how to use Python for web-scraping, organizing files, and interacting with APIs
- Learned how to collect and sort through data to prepare it for further analysis
- Learned how to use selenium for interacting with web browsers and beautiful soup for web scraping
